

generate_jobgraph

generate_rulegraph

all

```
graph TD; A[generate_jobgraph] --> C[all]; B[generate_rulegraph] --> C;
```

The diagram illustrates a dependency structure where two separate components, 'generate_jobgraph' and 'generate_rulegraph', both contribute to a common target labeled 'all'. The 'generate_jobgraph' node is highlighted with a green border, while 'generate_rulegraph' has a red border. Both nodes are rounded rectangles. Arrows from the bottom of each of these nodes point towards the 'all' node, which is also a rounded rectangle with a teal border and is positioned centrally below the other two.
